

Assignment -2
Python Programming

Assignment Date	27 September 2022
Student Name	SATHIYAPRIYA N
Student Roll Number	621319106314
Maximum Marks	2 Marks

Question-1:

Build a python code, Assume you get temperature and humidity values and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
import random
```

```
while True:
```

```
    temp=random.randint(1,100)
```

```
    humidity=random.randint(1,100)
```

```
    print("humidity is:{} ".format(humidity))
```

```
    print("Temperature is :{}".format(temp))
```

```
    if(humidity<=23):
```

```
        print("humidity is normal")
```

```
    else:
```

```
        print("humidity greater...!!")
```

```
    if(temp<=20):
```

```
        print("normal")
```

```
    else:
```

```
        print("hazard detected")
```

```
